Requirements Definition

1. User requirements:

This section specifies the requirements that the user expects from the system. The user requirement determining what the customer actually wants it to do

1.1 Functional Requirements:

Our system aims to rank the companies according to the ISO standards. Besides holding data of the current trends and do the sorting and choosing processes computerized way.

The main features supported by the application are as follows:

- Log In: A user needs to Log In before doing anything. Users are Admin or Proposing User or Applying User
- 2. Log Out: A user wants to Log out when he/she finish the needed work.
- 3. Add company information: adding details about a specific company
- 4. Delete a company: When a company ends it business it should be deleted from the current business companies.
- 5. Update company information: modify data about a company
- 6. Get information about a company: retrieve details about the company
- 7. Rank a company: ranks a company according to ISO standards
- 8. Add new trend: adding new trend to the system
- 9. Update trend data: modify data of a trend
- 10. Close a trend: when a trend is taken by a company the trend should be closed
- 11. Apply to a trend: a company applies to propose to get a trend.
- 12. Get current open trends: show the available trends that companies may apply to
- 13. Choosing a company to take the trend: when the deadline is reached, the system should automatically choose the best company according to quality and price

1.2 Non Functional Requirement

Constraints on the services or functions offered by the system such as timing, budget, authorization, development hindered us from applying other services. We wish to apply them afterwards.

- 1. Track company history: gets the data of the past projects held by specific company.
- 2. Have direct contact with the Saudi Commercial Chamber and its database.
- 3. Give authorized material about ranking of the companies according the ISO standards.
- 4. Give consultation services to companies to be able to get ISO standards.

2. System Requirements

2.1 Look and feel requirements

- The system should have a Graphical User Interface.
- It should be web enabled to support the online access.
- It should be easy to understand and surf.

2.2 Usability requirements

- The system should serve three different categories of users that are Administrators, Proposing User or Applying User.
- As long as all of the data of the companies and trends is available, any needed analytical reports can be accomplished.
- many companies including the governmental institution can add and get information out of the system

2.3 Operational Requirements:

• The system should be operating 24/7 days

2.4 Performance Requirements

Some business processes can be eliminated in the new system to save the time and the effort of the user. They are:

- Marketing for the proposing companies.
- Advertising about the trends.
- Individual efforts in order to investigate about a proposing company.

Also there are other processes that add more capabilities of the new system which are:

• Email notification of the result of the trends.

 Electronic selection of the company that wins the trends which saves effort, time and maintains accuracy.

2.5 Portability requirements

- Any user can login to their system at anytime from anywhere.
- System can run on any operating system like windows or UNIX.

2.6 Security requirement

- Nonregistered user must not be able to use the system.
- The privacy of the information of companies can be kept.
- Authentication is needed to log in to the system. Authorization is needed to get the proper screens for each user.
